                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              17-DEC-1998;
17-DEC-1998;
23-JUN-1999;
The present invention describes an isolated polypeptide comprising an immunogenic portion of an ovarian carcinoma protein (or its variants). Ovarian carcinoma proteins, and polypucleotides encoding them, have cytostatic activity and can be used in gene therapy and vaccines. Ovarian
                                                                                                                                                                                                  Immunogenic portion of an ovarian carcinoma protein and the nucleic acid encoding it, useful for the diagnosis, prevention and treatment of cancer, preferably ovarian cancer.

patient
                                                                                                                                                                                                                                                                                  This invention relates to polypeptides comprising an immunogenic portic of an ovarian carcinoma protein which acts as an immunostimulant and is cytostatic. The polypeptides, polypuclabotides, antibodies, fusion proteins, T cell populations and antigen presenting cells that express the polypeptides are useful for stimulating an immune response in a patient and treating ovarian cancer. This sequence represents DNA relation the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     17-JUL-2000; 2000US-00617747.

The composition containing the polypeptides, polynucleotides, fusion proteins, antibodies, T-cells or antigen presenting cells are useful for stimulating an immune response and treating ovarian cancer. Detecting the presence of the polynucleotides and protein cDNAs were identified using microarray technology. The present sequence represents a human ovarian carcinoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mitcham

Ovarian carcinoma proteins, and polymucleotides encoding them, have cytostatic activity and can be used in gene therapy and vaccines. Ovarian carcinoma polypeptides, nucleic acids, antibodies and vaccines are useful for the prevention, diagnosis and treatment of cancer, preferably ovarian cancer. AAA59691 to AAA70077 and AAB12552 to AAB12557 represent human ovarian carcinoma polynucleotides and proteins used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        17-DEC-1998;

The polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells that express the polypeptides are useful for stimulating an immune response in a patient and treating ovarian cancer. This sequence represents DNA related to the invention of the content 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1041 BP; 312 A; 223 C; 198 G;

                             The invention relates to an isolated 0772P polypeptide, which has the structure fully defined in the specification. The composition containing the polypeptides, polynucleotides, fusion proteins, antibodies, T-cells or antigen presenting cells are useful for stimulating an immune response and treating ovarian cancer. Detecting the presence of the polynucleotides and polypeptides is useful for diagnosing cancer. Ovarian carcinoma cDNAs and protein cDNAs were identified using microarray technology. The present sequence represents a human ovarian carcinoma antigen polynucleotides.
                                                                                                                                                                                                                                           Mitcham

Protein AMSH being signal transducer interacting with SH3 domain o cytokine signal transducer STAM, for diagnosis and development of of treating diseases e.g. severe infection, cancers and autoimmune f drugs

This sequence represents the murine AMSH gene. The AMSH protein is involved in signal transduction, and interacts with the SH3 domain of cytokine signal transducer STAM. The invention includes human and murine AMSH protein and gene sequences (hAMSH and mAMSH), and also includes antibodies directed against hAMSH and mAMSH. The AMSH protein can be used in the diagnosis and development of drugs for treating diseases due to the dysfunction of cytokine signal transduction e.g. severe infection,

                                                                                                                                                                                                                                      Š
                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                5
                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to novel genes (ABA11004-ABA21534) and proteins (C (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. C The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and covarian cancer and other cancers of the adrenal gland, bone, bone marrow, the reast, gastrointestinal tract, liver, lung, or urogenital; (b) immune c disorders e.g. Addison's disease, allergies, autoimmune haemolytic multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascultar disorders such as myocardial ischaemias; (d) wound healing (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from wipo at fip.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food
                                                                                                                                                                                                                    New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                       Claim 1; SEQ ID NO 21022; 103pp; English.

(II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1236 BP; 331 A; 317 C; 338 G; 250 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       620

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a cell death-inducible model non-human animal, characterised by deletion of the AMSH or/and AMSH-IP gene function on the chromosome. The model animals are applicable in screening promoters or inhibitors to treat and diagnose diseases in the nervous or immune system caused by deletion of AMSH and/or AMSH-IP. The current sequence

The model animals are applicable in screening promoters or inhibitors to treat and diagnose diseases in the nervous or immune syst caused by deletion of AMSH and/or AMSH-LP. The current sequence represents a mouse AMSH-LP gene fragment

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a cell death-inducible model non-human animal, characterised by deletion of the AMSH or/and AMSH-LP gene function on the chromosome. The model animals are applicable in screening promoters or inhibitors to treat and diagnose diseases in the nervous or immune system caused by deletion of AMSH and/or AMSH-LP. The current sequence

                                                                                                                                                                                                                                                                                                                                                                                                    В
                                                                                                                                                                                                                                                                                            8
                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human nucleic acids (AAI57798-AAI61369) and the CC encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful confidence in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous cytomic system, such as peripheral nervous injuries, peripheral nervous and containing and colling and containing the peripheral nervous system diseases, such as cytomic contained and contained and contained and containing and containing and containing and containing and containing activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, casays for receptor activity, arthritis and inflammation, leukaemias and containing containing cases of the printed specification
                                                                                                                                                                                                                                                                                                                                   Query Match
